- Keep all food and drink at the provided tables.
- Absolutely **NO FOOD OR DRINK IS ALLOWED INSIDE THE SIMULATOR BAYS!**
- Please be respectful to use language and volume appropriate for the general crowd, profanity will not be tolerated.

A golf simulator is a system of hardware and software components that track club and ball launch, conditions, speed, ball-flight and direction at the speed of light. It then simulates what the ball would have done in the real world in a virtual golf environment.

FSG uses infrared light to track launch conditions, then the data is collected and processed at the speed of light, so the virtual ball instantaneously continues into the virtual world when the real ball hits the screen. The FSG virtual ball flight starts at the exact point on the screen where the real ball hits and continues seamlessly on the same trajectory. Seamless integration of these technologies ensure accurate collection of data and instant infusion of that data into the golf simulation software, which renders the ball-flight and shot performance in the virtual environment, as if it happened outdoors.

Experience a new and fun way to compete with each other on a shooting range or an exotic hunting ground. Increase your gun ability target swing and accuracy through the use of a state of the art simulator.
